

Fayazur Rahman Summit

Sr. Software Engineer — Team Lead — IDARE Limited

+8801717627896 · frsummit1@gmail.com · Dhaka, Bangladesh

linkedin.com/in/frsummit · github.com/frsummit

SUMMARY

Senior Software Engineer and Full-Stack & Data Visualization Specialist with 8+ years of experience architecting high-performance web, mobile, and desktop applications. Proven leader in frontend engineering (React.js, Vue.js, Vite) and team mentorship, aligning technical strategies with business objectives. Specialized in transforming complex data into scalable enterprise SaaS platforms through advanced visualization (D3.js, Chart.js, Plotly), robust real-time backends (Node.js, WebSockets), and optimized, enterprise-grade AWS cloud deployments with smooth Git/CI-CD workflows.

EXPERIENCE

Sr. Software Engineer - IDARE Limited

12 December, 2021 - Present

Leading frontend engineering and system architecture to build a configurable, enterprise-grade Digital Twin Engine for the energy sector—digitally replicating entire asset life-cycles using predictive analytics, real-time data, and immersive visualization.

- **Leadership & Architecture:** Leading the frontend engineering team, managing client requirements, and designing scalable, modular UI architectures.
- **Advanced Engineering:** Implementing Big Data visualizations (WebGL/3D), real-time communication systems (WebSockets, WebRTC voice/video), and predictive analytics integrations.
- **DevOps & Optimization:** Architecting data response workflows for high performance and managing cloud deployment on AWS.
- **Business Alignment & Impact:** Conducted rigorous process reviews that identified critical capability gaps, accelerating sprint cycles by 15%; successfully translated complex wireframes into high-quality code and authored comprehensive technical documentation that reduced team onboarding time by 30%.

Achievements & Impact: Cost & Downtime Reduction: Spearheaded predictive maintenance solutions that slashed asset downtime by 18% and reduced maintenance costs by 22%.

Software Engineer - Mononsoft Limited

November 2020 - 9 December, 2021

Supervised the frontend development and lifecycle of an enterprise-grade ERP system (JERP) ensuring seamless end-to-end information flow across Supply Chain, Production, Sales, HR, and Finance for a venture founded by ex-Intel and Oracle entrepreneurs.

- **Team Leadership:** Directed an 8-member frontend development and testing team; structured sprint planning, task distribution, and workflows.
- **Frontend Engineering:** Developed responsive enterprise applications using React.js, Vue.js, Bootstrap, and jQuery.
- **API Integration & Collaboration:** Spearheaded API integration using Axios/Postman and collaborated with backend teams to optimize JSON data structures.
- **Cross-Functional Alignment:** Partnered with Business Analysts to implement system changes and regulated complex workflows like batch inventory, sales orders, and approval flows.
- **Release Management:** Oversaw Git repositories and branching strategies across development, testing, and production environments to ensure zero-downtime deployments.

Key Impact: Successfully delivered a robust, secure internal control and billing system optimizing distribution and performance tracking for large-scale clients like JMI & NIPRO Group.

Software Engineer - Simplexhub Limited

June 2018 - October 2020

Led and supervised large-scale development teams for an Australian-based outsourcing company, delivering high-performance web and mobile applications for clients across Australia, Canada, and the USA.

- **Team & Project Management:** Directed large development and testing teams; drove project priorities to ensure on-time delivery while handling cross-border communication with the Australian team.
- **Full-Stack & Cross-Platform Development:** Engineered responsive web applications using React.js and Vue.js, robust backends using Python Django, Node.js, and Spring Boot, and mobile apps via React Native/Java.
- **CRO & Personalization:** Developed and executed data-driven A/B testing and personalization campaigns using enterprise platforms like Oracle Maxymiser, Optimizely, and Adobe Target.
- **Quality Assurance:** Enforced strict Test-Driven Development (TDD) practices, conducted thorough code reviews and ensured cross-browser compatibility.
- **SDLC & Architecture:** Analyzed, planned, and optimized custom user controls and new modules following the full software development lifecycle for enterprise-grade scalability.

Jr. Software Engineer - HT Power Engineering Limited

August, 2017 - May 2018

Developed real-time monitoring and data visualization ecosystems for an enterprise electrical engineering company.

- **Full-Stack Development:** Built responsive web interfaces using Vanilla JS, React.js, and Vue.js, backed by scalable Node.js APIs.

- **Real-Time Monitoring & Alerts:** Engineered a live telemetry dashboard featuring automated notification systems that monitored 50+ active grid nodes, instantly flagging hardware anomalies and reducing failure response times by 35%.
- **Data Visualization:** Integrated advanced Charting libraries to analyze and graph real-time electrical metrics and power usage statistics.
- **Mobile App Development:** Developed a companion Android application to deliver remote power monitoring and critical system alerts directly to field technicians.

SKILLS

Languages & Frameworks: Javascript, NodeJs, ExpressJs, React, Vite, Python, Django
DevOps & Tools: AWS, Docker, CI/CD, Git, Github
Databases: PostgreSQL, MySQL, MongoDB
Other: HTML, CSS, Custom Data Visualization (D3, Plotly, Chart.js), WebSockets, Socket IO, WebRTC, WebGL, Postman
AI Assistants: Codex, Copilot, Claude, Gemini

PROJECTS

Knowverse AI <https://knowverse.idare.ai>
Knowverse AI is an intuitive, self-driven platform that empowers individuals and organizations to leverage the power of AI for data-driven decision-making without needing a team of data scientists.

- **No-Code AI:** Built an intuitive layout allowing users to build, clean, and deploy machine learning models without code.
- **Predictive Analytics:** Focused on forecasting trends, diagnosing data patterns, and segmenting complex data streams.
- **Explainable AI:** Provided interactive tools for users to fine-tune models and understand the underlying logic.

IDARE Dashboard Analytics <https://energymeta.idare.ai>
A modern analytics dashboard developed to provide real-time insights and scalability. The platform integrates React with a Vite-powered frontend for lightning-fast performance and supports a modular architecture.

- **Team Leadership:** Led the data visualization team, oversaw sprints, and analyzed business capability gaps.
- **Big Data Visualization:** Developed visualization systems integrating Plotly.js, WebGL, and custom drag-and-drop dashboards.
- **Metaverse Integration:** Developed a WebGL Meta Universe communication layout for real-time data transfer.

Digital Twin Digital Platform <https://www.movement.idare.ai>
Helps users create 2D/3D digital replicas of offshore wind-solar-oil-gas infrastructure assets in GIS spaces to facilitate energy transitioning concepts while mapping critical asset metadata.

- **Statistical Modeling:** Explored data trends, performed statistical modeling, and provided actionable recommendations.
- **High-Performance UI:** Designed a customizable React/Vite architecture featuring real-time data sync.

IDARE EDA - Exploratory Data Analysis <https://idare.ai>
An analytical ecosystem planned to examine dataset characteristics, identify missing value structures, explore distribution dependencies, and isolate structural insights across raw multi-source data inputs.

- **Agile & Git Delivery:** Streamlined task assignments, sprint planning, and oversaw strict Git version controls.
- **Cross-Functional Collaboration:** Collaborated with the API team to build robust, streamlined JSON data schemas.

JERP (ERP) <https://njpl.jerpbd.com>
An enterprise-level ERP application ensuring seamless information flow across supply chain, production, sales, distribution, HR, accounts, and collections workflows.

- **Full-Stack Engineering:** Developed application modules across React.js, Node.js, and Express.js ecosystems.
- **Team Management:** Supervised an 8-member frontend team, collaborating with corporate Business Analysts.

IPDC - Islamic Practice and Dawah Circle <https://report.ipdc.org.au>
A localized multi-tier system managing tracking, workflow planning, and community action logging across hundreds of central, state, and regional organizational nodes.

- **Three-Tier Architecture:** Built using a decoupled RESTful Web API, React Web UI, and a unified Mobile PWA.
- **Mobile PWA Development:** Built an adaptive progressive application leveraging Onsen UI 2 and Vue.js.

EDUCATION & CERTIFICATIONS

BSc in Computer Science & Engineering, Southeast University, Dhaka, Bangladesh	2014 - 2017
Optimizely X Web Foundations Certification, Optimizely	January 2019
Optimizely X Technical Foundations Certification, Optimizely	January 2019

LANGUAGES & INTERESTS

Languages: Bangla (Native), English
Interests: Bike Touring & Exploration (Long-distance cyclist; successfully completed routes exploring 70% of Bangladesh).
